

ONE-STOP LOGISTICS SOLUTION

RADIX

WE FIND YOUR WAY **TO SUCCESS!**

Radix is a logistics company
specialized in **ISO tank**.

Based on our many years of know-how on chemical container, inland transport, maritime transport and local logistics in many overseas countries as well as mutual confidence with customer, Radix has been constantly developing every year while expanding our service territory even to logistics of high-pressure liquefied gas and cryogenic liquefied gas.

In particular, Radix is an ISO tank specialist that currently has the largest number of special ISO tanks for high purity chemical for semiconductor, hydrogen peroxide and cryogenic liquefied gas in Korea.

We provide the most suitable logistics service with our professional and prompt response to customer needs.

19,476 ● Annual Movements (TEU)

1,400 ● Tank Fleets (TANK)

182 ● Ports for Service

60 ● Overseas Partners

MAIN BUSINESS

Radix, a global logistics company,
connects the whole world in the fastest and safest way.

Export & Import

Through comprehensive transport service from domestic trucking/railway transport to maritime and overseas local transport, we provide door-to-door one-stop service to any destination throughout the whole world.

Consulting

Based on our many years of logistics experience, we suggest customized logistics models that match each customer's needs and further satisfy their diverse needs through our differentiated consulting service by the experts of global logistics field.

Overseas Stock Sale

By storing cargoes at the Radix bonded warehouse in collaboration with our overseas partner in order to enhance our customer's competitive edge at the local destination, we provide a total logistics service that enables our customer to quickly cope with requests for customs clearance and delivery for overseas buyers.

Warehousing

By collaborating with the major domestic ports and warehouses located close to industrial complex, we support various kinds of delivery terms that customers want while providing a total solution from storage of cargo to repackaging service.

Triangle Logistics

Through our close partnerships, we even provide a triangle logistics service from overseas production base that does not pass through Korea to overseas destination.

Goods Insurance

Based on our long-term business relationship with a professional global insurer, we help you to take out the perfect cargo insurance for export/import that complies with the terms and conditions of our customer.

LIQUID

Do you handle liquid chemicals?

Radix currently has the unparalleled know-how of liquefied chemical products in the industry. Meet the most systemic global DOOR-TO-DOOR liquid transport service from now on.

ISO Tank

ISO Tank is a container for transporting liquid cargo, which has been manufactured in compliance with the international standards of International Maritime Organization and International Standards Organization. It has been designed to transport cargo in liquid state by installing an inner cylinder container within the frame of the 20FT general dry container standard, which makes it possible to ship cargoes (loading, unloading, stacking and loading to vehicle and vessel) in the same way as the general dry container. We Radix provide a selection of tanks including T11, T14, T20, T22, etc. according to the traits of each cargo.

Baffle Tank

Baffle Tank is a tank with splash plates(baffle) embedded within. As it reduces the impact of liquid splashing during transport, it makes it possible to transport less amount of liquid cargo than the minimum loading amount specified by International Maritime Organization.

Electric Heating / Cooling Tank

Equipped with an electric system, Electric Heating / Cooling Tank is a tank that has been designed to maintain the set temperature during transport. The available set temperature is 0°C ~ 55°C for Heating Tank and -29°C ~ 29°C for Cooling Tank. This tank is suitable for transporting chemical products that are sensitive to temperature change, as it can cause crystals to be formed or quality deterioration if is outside of certain temperature.

Lining Tank

Lining Tank is a tank which has been specially coated inside with a separate material and has been designed to be suitable for transporting strong acidic or strong alkaline products. We provide customized ISO Tank by manufacturing and leasing tank in accordance with the traits of each cargo such as high-purity chemicals for semiconductors.

Tank with Pump & Hose

Tank with Pump & Hose is a general ISO tank equipped with an additionally manufactured pump and hose. It has been designed to unload cargoes from the tank by utilizing the embedded pump and hose as if using a tank lorry, even in the case that importer does not have separate equipment for unloading.

SBC (Small Bulk Container)

SBC (Small Bulk Container) is an ISO tank container scaled down to the size smaller than 20FT tank container. It is suitable for transporting small amount of liquid or liquefied gas form of products. By using these SBCs in various volumes and specifications, small amount of cargoes can be safely and efficiently transported, stored and used.

Flexibag

Flexibag is a disposable container for transporting chemical products, oil, fuel, foods, etc. in replacement of drum and IBC. Only non-hazardous liquid cargoes can be loaded when Flexibag is installed at 20'GP container, and we provide and install a collection of Flexibags in various sizes according to the trait and loading quantity of cargoes.

Lease & Purchase

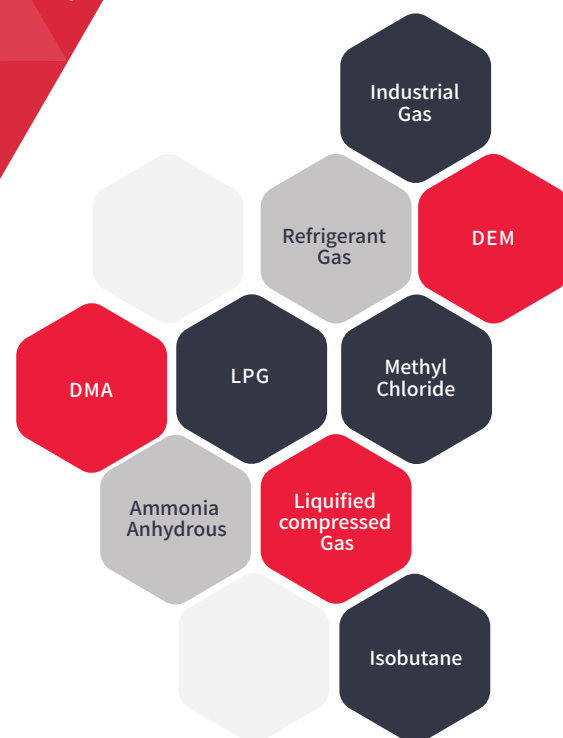

In case that you need to use tanks for a long period or need a tank dedicated to your product, we support you to establish the most competitive business model.

GAS

Do you handle GAS?

Radix operates various gas tank containers.
Meet the most systemic global door-to-door gas transport service from now on.

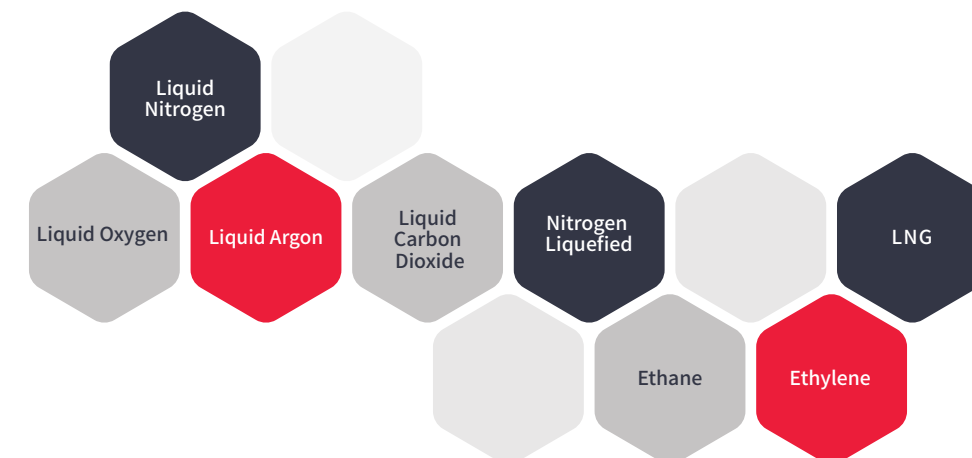

T50 Gas Tank

T50 Tank is used to transport liquefied gas which is compressed to high pressure. It can carry smaller amount of cargo than the minimum loading quantity with splash plates (baffle) mounted within the tank. It endures high pressure while maintaining the pressure of the evaporation point, which allows safe and sound delivery.

T75 Cryogenic Tank

T75 Tank is a tank for cryogenic liquefied gas, which condense gas and transports the liquefied gas. Once gas is liquefied, it can be transported about 600~800 times more capacity than that of gas, making it efficiently transported. Moreover, its vacuum insulation allows it to maintain the cryogenic state within the tank, and an inner pressure control device has been embedded to maintain the pressure.

PROJECT

Do you handle project cargo?

Radix provides efficient and economical service by taking the size, shape and weight of various cargos that are handled in plant business into consideration.

GP Container (General Purpose Container)

GP Container is a container most commonly used for transporting general cargoes.

Open Top Container

Open Top Container is a container that can load cargoes of a size higher than the standard of general container.

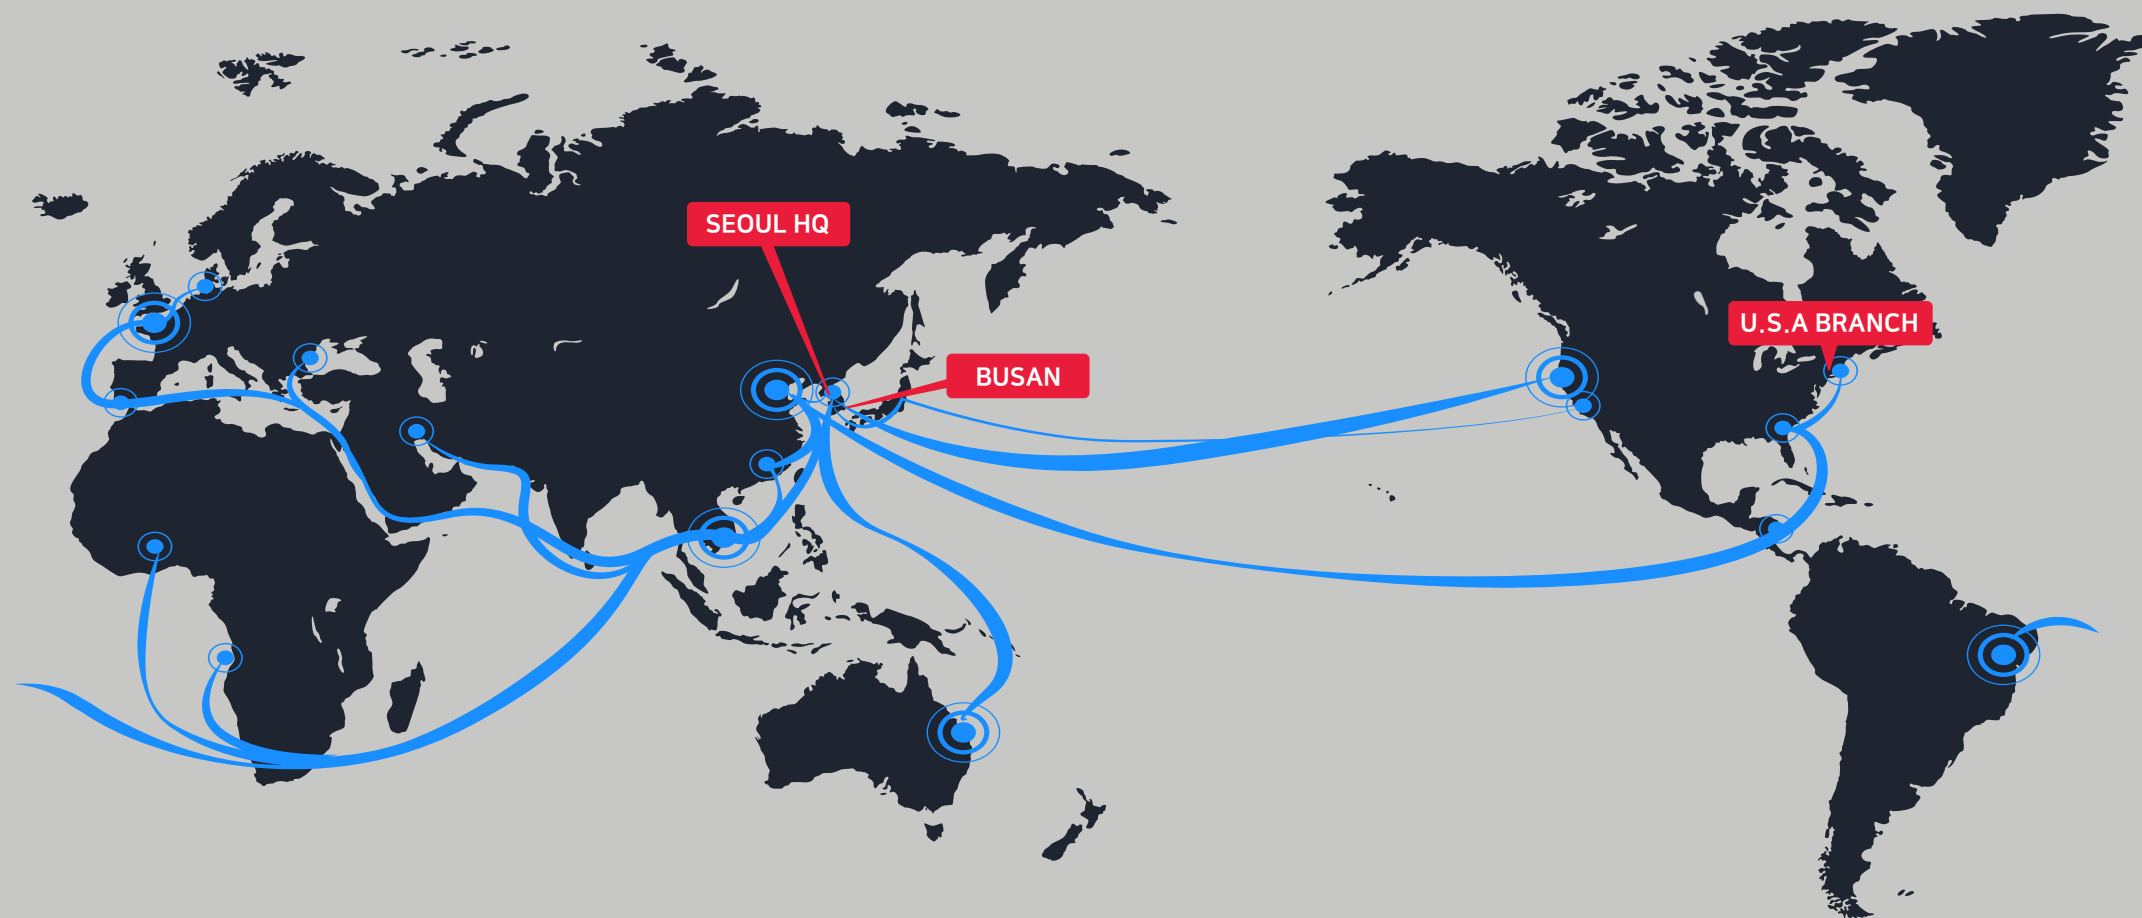

Flat Rack Container

Flat Rack Container is a container used for loading heavy cargoes such as machinery or lumber and cargoes that are higher and wider than those of general container.

Designed to transport large-sized machinery or heavy equipment, this container is usually operated at the project level and suitable for transporting facilities needed for building large-sized factory.
